

Is it possible to view quad display on a DVR spot output?

Applies to: VDM, VDC, Vi-series, M-series

No, the spot monitor outputs are not capable of displaying a quad view.

The main monitor output can display full screen, quad, 9-way split or 16-way split.

If you require additional quad views, this can be achieved by adding one or more Videoswitch quad processor such as the Vi-P14.

The Vi-P14 has loop-through video BNC connectors (as do some of the DVRs) so it is easy to loop through the camera signals to both the DVR and the quad processor.
